

Non-newtonian Dinner

Newtonian fluids

☞ Sirop of Anjou and Wooded Manuka honey ☞

Liquids that flow with more or less ease, and their flow does not change whatever we do.

Dilatent fluids

☞ Fidji's spring water and cornstarch cream ☞

Liquid as long as we do not press them too hard. But they become viscous, even solids if we press them hard.

Viscoelastic fluids

☞ Rustic bread dough tartar on its wicker basket ☞

Viscous and elastic at the same time, they finds back their form or volume, after being deformed.

Viscoplastic fluids

☞ Poultry cooked with mayonnaise and Sticky rice ☞

☞ Tarte sablée with whipped cream ☞

Solids as long we don't press on them, they can be smoothly deformed when a force is exerted on them.
